

Stainless Steel surfaces are common targets for taggers using various tools to deface the surface leaving sometimes irreparable damage. Replacement or repair options are time consuming, very costly and never really restore the surface to the original appearance.

Solar Gard® Metal Shield anti-vandalism film is a durable, proven solution to quickly and cost-effectively eradicate vandalism - like it never happened.

Metal Shield is professionally applied to interior or exterior surfaces erasing existing graffiti and renewing the original stainless steel appearance. Once installed, Metal Shield is undetectable and acts as a sacrificial barrier between vandals and the surfaces they attempt to deface.

Professionally installed Metal Shield restores the surface and protects it from future vandalism incidents including paint, scratches, markings and even acid etching. The application and/or replacement process is quick ensuring minimal impact on daily business and operations.

Other Key Benefits:

- Provides a glossy finish, which resembles the original stainless steel surface appearance.
- Has a unique scratch resistant coating that effectively resists the effects of acid etching and routine cleaning.
- The thick, 150 micron polyester based product, makes it difficult to penetrate and damage the underlying surface and effectively covers existing scratches providing a like-new appearance
- The exclusive adhesive system allows a qualified technician to easily peel away the film without transferring adhesive to the surface

Protect your public spaces and most importantly your company image with Solar Gard anti-vandalism films. Escalators, elevators, public transport, vending and ticketing machines, restrooms, fuel pumps, displays, public buildings, hospitals, hotels and restaurants are all typical applications that would enjoy the restorative and protective features of Metal Shield film.
