

## Private residence, Bloomfield Hills, Michigan

### Installation Summary

**Problem:**

Excessive glare during the afternoon  
Intense sunlight impaired panoramic, scenic views  
Potential for extensive fade damage of interior furnishings

**Solution:**

Solar Gard Panorama Slate 40 & Slate 30

**Amount of film:**

Approximately 1,000 square feet

**Benefits:**

Eliminated glare and hot spots  
Balanced temperature year-round  
Enhanced panoramic view of garden, terrace and lake  
Protected against premature fading of interior furnishings

“Even icy, cold, northern climates benefit from Solar Gard® Panorama® by minimizing the problem of uncomfortable glare off the snow. Window film reduces hot spots and keeps temperatures balanced throughout the summer, while treasured artifacts and interior furnishings receive a high level of protection against sun-related premature fading and deterioration year-round.” Ed Golda, Solar Gard Elite Dealer

**A window film for all seasons.**

No matter the season, this Bloomfield Hills, Michigan residence makes an impact on passersby with its impressive, stately appearance. The opulent two-story, lakeside estate boasts a pristine exterior, an elegant interior and numerous floor-to-ceiling windows — giving the homeowners unparalleled garden, terrace and lake views. However, not only did these windows bring the outdoors in,

they also brought about eye-straining glare, excessive heat and harmful ultraviolet light that created an uncomfortable climate and could potentially damage the exquisite furnishings.

Ed Golda of Michigan Glass coatings was called upon to develop an effective solar solution for this pretigious home’s sun-related problems. Past experience led him to suggest low-reflective Panorama® Slate 30 and 40

window films for their light appearance, fade protection and glare reduction properties, as well as to minimize heat gain in the warmer months. Approximately 1,000 square feet was installed, providing immediate, noticeable benefits for the homeowners.

The southern living room overlooking the lake was instantly a more pleasurable space. Because the films screen out an average of 59 percent of the sun’s

total solar energy, the intense, afternoon glare and hot spots were eliminated. Plus, since Panorama blocks over 99 percent of damaging and harmful ultraviolet light, the homeowners appreciate the added fade protection that the film delivers. Ed provided excellent workmanship, first-rate service and a cost-effective solution to the homeowner’s problems. Now, the residents can comfortably enjoy their scenic views anytime or any season.

Only available through an authorized Panorama dealer.
