The intended use of this EPD is for B2B communication.

The EPD owner has the sole ownership, liability, and responsibility for the EPD. EPDs within the same product category but from different programs may not be comparable. EPDs of construction products may not be comparable if they do not comply with EN 15804:2012 + A2:2019. For further information about comparability, see EN 15804:2012 + A2:2019 and ISO 14025.

# 2. Company Information

# Introduction to the Saint-Gobain Group

Saint-Gobain's purpose is "Making the World a Better Home". With this purpose, the Saint-Gobain Group takes on the ambition to improve everyone's lives by making the planet a fairer, more harmonious and sustainable living space. Through its business model generally and its solutions in particular, Saint-Gobain has a tangible impact on the life of each individual, their environment and their way of working, caring for themselves and getting around.

The Group's purpose is the link between the infinitely small unit of each person's living space and the infinitely large one of our shared home: the planet.

166,000 EMPLOYEES

EMPLOYEES SALES

€44.2 bn

By committing to protect health and promote well-being, the Saint-Gobain Group affirms its desire to take action to maximize its positive impact and to avoid or to minimize any potential negative footprint related to its activity. With regard to its employees, this involves promoting a healthy working environment and taking action to protect their health.

With regard to customers and end users, this involves, in particular, ensuring the safe use of its solutions. With regard to local residents and communities around the Group's sites, this involves complying with applicable regulations and striving to go beyond them, collaborating with local public health agencies, or participating in the social development of communities.

50 AGREEMENTS SIGNED IN 2021 Saint-Gobain was founded in 1665 by Louis XIV, under the name of the "Royal Manufacture of Mirrors", in order to put an end to the technological and commercial supremacy of the Republic of Venice in the manufacturing of mirrors. Throughout the 19th century, the "Compagnie de Saint-Gobain" became a limited company and diversified its activities into sectors such as chemicals, glass products and the automotive industry. It quickly expanded into international markets, establishing itself in the United States in 1829, Germany in 1858, Italy in 1888 and Spain in 1905.

In 1970, the Group invested heavily in research and development, withdrew from its chemical activities and merged with Pont-à-Mousson, created in 1856 and specialized in cast iron pipes.

In 1982 Saint-Gobain was nationalized. But only for a short period: in 1986 Saint-Gobain was again privatized and this was a huge popular success as 1,500,000 shareholders subscribed to the operation.

In 1990, through the acquisition of NORTON $^{\circ}$ , the Group doubled its presence in the United States, opening up new markets and enabling it to develop its know-how

In 2007, Saint-Gobain started to focus its strategy on sustainable housing, while continuing to serve many industrial markets and, thanks to its numerous locations, continued to expand in emerging countries.

2023, the Saint-Gobain Group has a commercial and/or manufacturing presence in approximately 75 countries.

#### Saint-Gobain Products and Solutions

Saint-Gobain provides construction and renovation solutions for both residential and commercial buildings. These solutions meet the needs of professional and private customers both in terms of building interiors and the distribution of spaces and building envelope.

For its customers in mobility markets, Saint-Gobain produces glazing that provides daily safety and comfort for motorists, but also for the aeronautical and rail sectors, the maritime sector and industrial vehicles. The Group also offers solutions to improve the performance of electric vehicles (energy efficiency, well-being, safety and connectivity), distributes replacement automotive glazing on the independent market, designs and supplies bearings and tolerance rings.

Saint-Gobain also offers high-performance technological solutions such as airborne and ground radomes.

For all its industrial customers, and notably for the construction industry, Saint-Gobain draws on its technological competencies (materials science, formulation, design of glass applications, ceramics, abrasive solutions, performance polymers and fiberglass) and its expertise in multiple cutting-edge applications that use the particular properties of its materials (resistance to high temperatures, abrasion, chemical stability, surface properties, etc.).

Many solutions are co-developed with customers, notably in high-performance plastics and refractories for metallurgy or the glass industry.

Due to the extensive portfolio of products and solutions in a wide range of segments there are many brands under the Saint-Gobain umbrella.

#### **Solar Gard**

Solar Gard builds on nearly 50 years of experience in the development and production of window films and has a presence in over 90 countries.

Solar Gard is a world leader in patented technologies for solar control and protective window film for both residential and commercial buildings, vehicles and public transport.

In 2011 Solar Gard became a part of Saint-Gobain as the "Thin Films" division. This allowed to cross-leverage sputtering technology that is used both for producing window films and low-E coatings on glass. In addition the integration created important synergies within the repovation and upgrade offering as well as in the mobility segment.

# **Solar Gard Products and Solutions**

The Solar Gard architectural solar films provide solutions for upgrading and enhancing the performance of existing glass and facades of homes and commercial buildings thus improving both winter and summer thermal comfort, increasing visual comfort and reducing the need for cooling.

Solar Gard Decorative films are available in a variety of styles and opacities to help enhance any glazing system to create unique, functional and attractive spaces needing privacy or sophistication. The series includes bird-control options to cost-effectively distinguish the glass to birds, preventing deadly collisions and promoting sustainability.

The Solar Gard architectural safety films provide solutions for enhancing safety and security of existing glass and glass facades across all segments and reduces the risks of passengers, residents, employees being hurt by shreds of broken glass in the case of an explosion or any glass breakage and increases the level of protection in case of intrusion.

Solar Gard Anti-graffiti films are applied as sacrificial surface protection of surfaces against scratches, graffiti, etching, etc., be it glass or metal surfaces, in buildings but also in trains, trams.

# In concrete terms Solar Gard Solutions help to:

- Reduce energy consumption with a payback time of up to 3 years.
- Improve the comfort of the indoor climate and make if much more pleasant.
- Introduce sustainable solutions in the context of LEED/BREEAM or HQE label.
- Increase occupants wellbeing and productivity.
- Protect people from broken glass in the event of an accident, explosion or aggression.
- Secure a building against burglary/intrusion.
- Protect occupants against dangerous UVA and UVB radiation with an equivalent SPF of > 285.
- Protect an interior, museum or shop against fading and the negative consequences of UV-radiation.

# 3. Sustainability

CO2 EMISSIONS

- 23%

REDUCTION FROM 2017 TO 2021\*

WITHDRAWALS AVOIDED

9.952 Mt

OF NON-EXTRACTED VIRGIN RAW MATERIALS

RESPONSIBLE PURCHASING

100%

OF PURCHASES COVERED BY THE SUPPLIERS' CHARTER\*\* Sustainability is a long standing commitment for Saint-Gobain.

"Making the world a better home," is the most precious of headings for Saint-Gobain to follow.

Saint-Gobain is a multi-local organization, driven by the global aim of working each day to make the world a more beautiful and more sustainable place to live. It is reflected in the design and manufacture of solutions which are key ingredients in the well-being of each and the future of all, while taking care of the planet at the same time.

In addition to the multiple actions that have been implemented over the past years across Saint-Gobain sites world-wide, Saint-Gobain has set in 2021 an ambitious target of **Carbon neutrality by 2050** 

In this roadmap, **2030 is an intermediate but crucial stage**. The Group is committed to reducing by then its direct and indirect CO2 emissions by 66% compared to 2017. In doing so, Saint-Gobain will make no concession toward the excellence of our products or our competitiveness.

Each year through to 2030, around €100 million is being reserved annually for industrial investments and research & development to reach these targets.

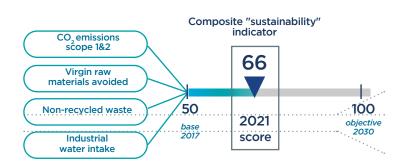

The Group have also adopted the target of reducing our Scope 3 (up and downstream from our operations) emissions by 16% by 2030 measured against the 2017 base line.

The Group also continues to reduce the water usage across all its sites and more in particular the Group is putting actions in place to reduce the water discharge by 80% vs the 2016 base line.

Also the sites in San Diego where the Solar Gard products are produced and the site in Belgium from which most products are supplied to Europe are working towards the Groups' targets.

Technologies to decarbonize our processes

# 4. Product description and use

This Environmental Product Declaration (EPD\*) describes the **Solar Gard\* Anti-Graffiti and Decorative films up to 2 mil.** 

These products have a **warranty period of 10 years respectively 5 years** for the anti-graffiti film. (\*) The expected average service life longer provided when the specified conditions for installation, use and maintenance are followed. Consider however that anti-graffiti films are intended as sacrificial surface protection. which is outside the warranty.

The products covered in this EPD can be obtained in different dimensions, more in particular in different widths, (namely: 0,91 m wide, 1.22 m wide, 1.50 m wide).

The width of 1.52 m (=60") is a representative average and used as basis for the EPD.

As to the length: 100 ft (or 30,5 m) is the standard length. In some cases products with longer length are supplied (eg: 165 ft (50 m) or several custom-lengths) but these are in the same packaging as the standard 100 ft rolls. Hence, also for these products the reference is representative.

# The reference product

In total this EPD covers 5 products, 4 decorative films and 1 graffiti film.

**The reference product** for the group of products covered in this EPD is Solar Gard **CLEAR FROST RA** (supplied as roll of 1.52 m (60") wide and 30.5 m (100 ft) long). The variability between any of the products5covered in this EPD and the reference product CLEAR FROST RA remains within ±10% as is required by the governing PCR.

If wished or required, detailed data for each and any of the products covered by this EPD can be obtained from SGIMB/Solar Gard.

### **Product classification**

All products covered in this EPD meet the requirements of EN 15752-1 "Glass in building - Adhesive backed polymeric film - Part 1: Definitions and requirements".

The products are classified according to ICS under 83.140.10 "Films and sheets" and according to Central Product Classification (CPC), United Nations, New York, 2015 under section "Self-adhesive plates, sheets, film, foil, tape, strip and other flat shapes, of plastics" 3919 (HS 2007) resp. 36920 (CPC2), 2220 (ISIC 4).

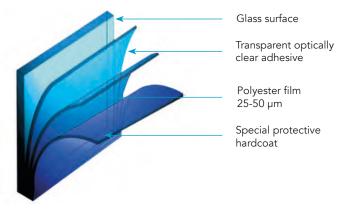

Table 1 gives an overview of the solar window films product references covered in this EPD.

# **Product description and performance**

The Solar Gard Deco films, anti-graffiti films covered in this EPD consist of a single layer of PET.

Decorative films are available in a variety of styles and opacities to help enhance any glazing system to create unique, functional and attractive spaces needing privacy or sophistication. The Series includes bird-control options to cost-effectively distinguish the glass to birds, preventing deadly collisions and promoting sustainability.

Anti-graffiti films are applied as sacrificial surface protection of surfaces against scratches, graffiti, etching etc.. be it glass or metal surfaces, in buildings but also in trains, trams. Anti-graffiti films come different thicknesses resulting in different levels of protection against mechanical damage.

#### Table 1

List of the solar window film products covered in this EPD. The table contains the commercial names and the base metal in the sputtered layer that gives the film its specific functionality.

| Product family<br>Solar Films | Nominal<br>thickness (μm) | Product<br>Name    | Mounting<br>Adhesive | Optics                           |
|-------------------------------|---------------------------|--------------------|----------------------|----------------------------------|
| Decorative films              | 50                        | CLEAR FROST RA     | Removable Acrylic PS | Frost look,<br>high translucence |
|                               | 50                        | BLACK OPAQUE RA    | Removable Acrylic PS | Black                            |
|                               | 50                        | WHITE OPAQUE RA    | Removable Acrylic PS | White                            |
| Graffiti film                 | 50                        | 2 mil GRAFFITIGARD | Removable Acrylic PS | Clear, transparent               |
| Clear Deco film<br>for print  | 50                        | PCR2               | Removable Acrylic PS | Clear, transparent               |

All the window films covered in this EPD reject more than 99% of the damaging UV rays.

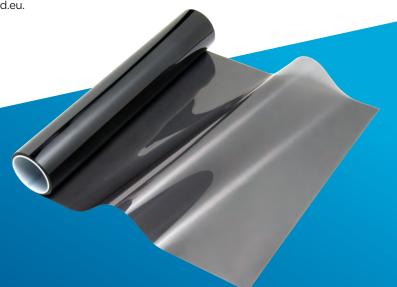

The reference product CLEAR FROST RA. The product is intended for visual comfort, fading protection and privacy but still offers a level of heat rejection: total solar energy rejection (TSER) of 35% on single glass and 37% on an insulated glass unit (IGU) consisting of 2 standard clear panes. The Infrared Energy rejected (IRER) is 31% on single clear glass.

The table 2 gives an overview of the key solar energy protection performances of the films covered in this EPD. These values are based on spectral measurements and calculations according to EN 410. The fading protection is measured and calculated according to Twd-ISO.

**Table 2: Key performances** 

| Product name       | VLT<br>(%) | VLR e/i<br>(%) | TR<br>(%) | IRER<br>(%) | G-value | TSER<br>(%) | SHGR<br>(%) | TdW<br>ISO (%) |
|--------------------|------------|----------------|-----------|-------------|---------|-------------|-------------|----------------|
| CLEAR FROST RA     | 65         | 25/27          | -         | 31          | 0,65    | 35          | 25          | 45             |
| BLACK OPAQUE RA    | 0          | 6/7            | -         | 77          | 0,23    | 77          | 73          | 0              |
| WHITE OPAQUE RA    | 9          | 70/84          |           |             |         |             | 76          | 7              |
| 2 mil GRAFFITIGARD | 88         | 10/10          | 78        | 19          | 0,81    | 19          | 6           | 63             |
| PCR2               | 88         | 10/10          |           | -           | -       |             | -           | -              |

In addition to the above light and solar energy performance characteristics, the products have other physicial performance characteristics as given in table 3. Full details, including the performance on other glazing combinations can be found on https://www.solargard.eu.

**Table 3: Additional product characteristics** 

## Products covered in this EPD meet also following requirements

| Chemical composition   | Comply with REACH regulations                      |                     |
|--|--|---------------------|
| Reaction to fire<br>(European Construction Products Directive) | EN SBI 13238                                       | B-s1, d0            |

| Cardboard or HDPE end plug | 0,09 g/m <sup>2</sup>            | 0,1%                             |
| MDF end plates             | 0,82 g/m <sup>2</sup>            | 0,70%                            |
| Pallet                     | 3,44 g/m <sup>2</sup>            | 2,9%                             |
| Shrink wrap                | 0,36 g/m <sup>2</sup>            | 0,3%                             |

| Product              | Weight kg/m²            |
|----------------------|-------------------------|
| Total product weight | 0.117 kg/m <sup>2</sup> |

The products covered in this EPD do not contain any hazardous substance listed in the "Candidate List of Substances of Very High Concern (SVHC) for authorization" version ECHA/NR/23/02 (dated January 2023).

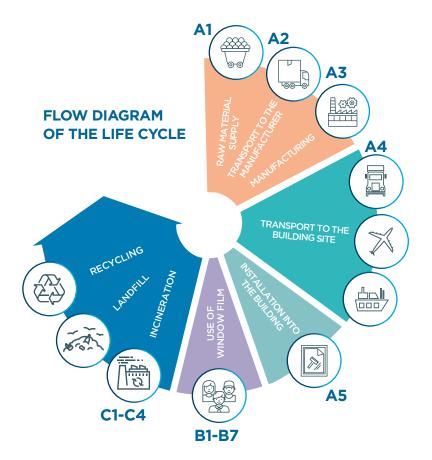

The verifier and the program operator do not make any claim nor have any responsibility of the legality of the product.

# 5. LCA calculation information

| EPD TYPE DECLARED                     | Cradle to grave and module D   |
|---------------------------------------|--|
| DECLARED UNIT                         | 1 m² of installed window film  |
| SYSTEM BOUNDARIES                     | Cradle to grave + Module D = A + B + C +D  |
| REFERENCE SERVICE LIFE (RSL)          | The Reference Service Life (RSL) of the windows film product is considered to be 10 years for decorative films and 5 year for graffiti films.  This is equal to the warranty period, i.e. the amount of time that we recommend our products last for without refurbishment, however the life expectancy is between 15-20 years.  |
| CUT-OFF RULES                         | Not applied, all the information is considered.  Flows related to human activities such as employee transport are excluded.  The construction of plants, production of machines and transportation systems are excluded since the related flows are supposed to be negligible compared to the production of the building product when compared at these systems lifetime level.  |
| ALLOCATIONS                           | The data for the site has been allocated on the basis of a surface distribution considering that the manufacturing impacts per m² of product are the same regardless of the product manufactured.  The polluter pays as well the modularity principles have been followed.   |
| GEOGRAPHICAL COVERAGE AND TIME PERIOD | Scope includes: Europe and MEA/India Data is collected from one production site in San Diego, USA Data collected for the year 2019. Cradle to grave study. Background data: The databases, thinkstep 8.7 or ecoinvent v.3.6  |
| PRODUCT CPC CODE                      | 36920 - Articles of Plastic n.e.c.   |
| VARIABILITY                           | Life cycle assessment calculations were carried out to cover the different categories of film families. The variable parameters are the number of layers, the existence of metal sputtering and the weight of each layer.  An assessment of the influence of the variations on the overall life cycle results of the films was carried out for the following indicator: Climate change - fossil.  The results of the sensitivity study show that the differences in the impacts of the different products do not exceed by + 10% the impacts of the product used as a reference: CLEAR FROST RA. |

According to EN 15804:2012+A2:2019, EPDs of construction products may not be comparable if they do not comply with this standard. According to ISO 21930, EPDs might not be comparable if they are from different programmes.

# 6. Life cycle stages

## **Product stage, A1-A3**

Description of the stage: the product stage of windows film products is subdivided into 3 modules A1, A2 and A3 respectively "Raw material supply", "transport to manufacturer" and "manufacturing".

#### A1, raw material supply.

This includes the extraction and processing of all raw materials and energy which occur upstream from the manufacturing process.

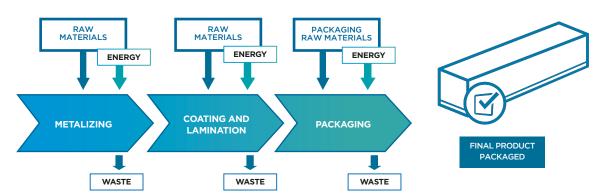

#### A2, transport to the manufacturer.

The raw materials are transported to the manufacturing site. The modelling includes road, boat, plane and/or train transportations of each raw material.

#### A3, manufacturing.

This module includes the manufacture of products and the manufacture of packaging. The production of packaging material is taken into account at this stage. The processing of any waste arising from this stage is also included.

#### MANUFACTURING PROCESS FLOW DIAGRAM

#### Manufacturing in detail:

The films are produced from one or more layers of PET film. One of the films is coated with a metal or a variety of metals (through a process of metal deposition by ionization under vacuum, called sputtering (\*)). The performance of the final product is determined by the type and amount of the sputtered metal. The films (\*) are then laminated together and an adhesive and a liner are applied to the film. The liner protects the adhesive during storage and transportation, and is removed prior to installation.

The packaging is made up of four components: core, sleeve, box, and pad plugs (or end-caps).

The core, a tube made of cardboard, is what the finished film is wrapped around.

The sleeve covers and protects the roll of film, and is made from low density polyethylene (LDPE).

A cardboard box is used to protect the film during transport, handling and storage. The boxes are also labelled with information of product name, type, dimensions and an unique batch number.

Pad plugs (end caps) are made from high density polyethylene (HDPE) or cardboard; there are 2 end caps in each box. The function of the end caps is to keep the roll away from touching the cardboard box and to core to keep the roll stable in the box.

(\*) only for the solar window films. The Clear films do not have a sputtered layer in the construction.

# Construction process stage, A4-A5

Description of the stage: the construction process is divided into 2 modules: A4, transport to the building site and A5, installation in the building.

## A4, transport to the building site.

This module includes transport from the production gate to the building site. Transport is calculated on the basis of a scenario with the parameters described in the following table. Data is calculated from the arithmetic mean covering all sales destinations in Europe and MEA/India.

| PARAMETER  | VALUE (expressed per Declared unit)  |
|--|--|
| Fuel type and consumption of vehicle or vehicle type used for transport e.g. long distance truck, boat, etc. | Transport, freight, lorry (mix of EURO 0-6)<br>Transport, freight, sea, container ship<br>Transport, freight, aircraft |
| Distance   | Truck: 2923 km<br>Ship: 8598 km<br>Plane: 2056 km  |
| Capacity utilisation (including empty returns)   | Default value from Ecoinvent 3.6 for the 3 mode of transportation (lorry, container ship and aircraft)                 |
| Bulk density of transported products   | Between 7440 - 3255 m² per pallet  |
| Volume capacity utilisation factor   | 1 (default)  |

## A5, installation into the building.

The accompanying table quantifies the parameters for installing the product at the building site. All installation materials and their waste processing are included.

| PARAMETER   | VALUE (expressed per declared unit)   |
|---|---|
| Ancillary materials for installation (specified by materials)   | Soap 0.005 kg/m²  |
| Water use   | 1 kg/m <sup>2</sup>   |
| Other resource use  | None  |
| Quantitative description of energy type (regional mix) and consumption during the installation process  | None  |
| Wastage of materials on the building site before waste processing, generated by the product's installation (specified by type)  | Film: 0.006 g/m² (5%)   |
| Output materials (specified by type) as results of waste processing at the building site e.g. of collection for recycling, for energy recovering, disposal (specified by route) | Film: 0.006 kg/m² (5%) to landfill (46%¹), recycling (15%¹) and incineration with energy recovery (40%¹) Cardboard box: 1.48 g/m² to landfill (69%²) and recycling (31%²) Cardboard core: 1.2 g/m² to landfill (69%²) and recycling (31%²) LDPE sleeves: 0.03 g/m² to landfill (46%¹), recycling (15%¹) and incineration with energy recovery (40%¹) Cardboard or HDPE end plug: 0.09 g/m² to landfill MDF end plates: 0.82 g/m² to landfill (69%²) and recycling (31%²) Pallet: 3.44 g/m² to landfill (69%²) and recycling (31%²) Shrink wrap: 0.36 g/m² to landfill (46%¹), recycling (15%¹) and incineration with energy recovery (40%¹) |
| Direct emissions to ambient air, soil and water   | None  |

# Use stage (excluding potential savings), B1-B7

Description of the stage: The use stage, related to the building fabric includes:

- B1, use or application of the installed product;
- B2, maintenance;
- B3, repair;
- B4, replacement;
- **B5**, refurbishment;
- B6, operational energy use
- B7, operational water use

The product has a reference service life of 12 years according to the warranty period. This assumes that the product will last in situ with no additional or specific requirements for maintenance, repair, replacement or refurbishment throughout this period. Therefore, it has no impact at this stage.

The water consumption for cleaning the windows is not considered as it is already included in the glass EPD, as requiered of the PCR.

## **End-of-life stage C1-C4**

Description of the stage: This stage includes the next modules:

- C1, de-construction, demolition;
- C2, transport to waste processing;
- C3, waste processing for reuse, recovery and/or recycling;
- C4, disposal, including provision and all transport, provision of all materials, products and related energy and water use.

#### Description of the scenarios and additional technical information for the end-of-life:

| PARAMETER  | VALUE (expressed per Declared unit)                                      |
|--|--|
| Collection process specified by type                       | 46% collected with mixed deconstruction and demolition waste to landfill |
| Recovery system specified by type                          | 15% to recycling disposal<br>40% to incineration with recovery of energy |
| Disposal specified by type                                 | 46% to landfill  |
| Assumptions for scenario development (e.g. transportation) | 50 km to landfill and incineration<br>100km to recycling disposal        |

# Reuse/recovery/recycling potential, D

The scenario is 40% of wastes are incinerated with recovery of energy and 15% of wastes are recycled. The benefits from recovery of energy and recycling are reported on stage D.

# 7. LCA results

As specified in EN 15804:2012+A2:2019 and also the Product-Category Rules, the environmental impacts are declared and reported using the baseline characterization factors from EC-JRC, available in the next link: https://eplca.jrc.ec.europa.eu/LCDN/developerEF.xhtml.

Specific data has been supplied by the plant, and generic data come from GABI and EcoInvent databases. All emissions to air, water, and soil, and all materials and energy used have been included.

All figures refer to a declared unit of 1 m<sup>2</sup> of installed windows film.

The following results corresponds to the reference product for the family of products in this EPD - namely CLEAR FROST RA.

Description of the system boundary (X = Included in LCA, MNA = Module Not Assessed)

# Additional voluntary indicators from EN 15804 (according to ISO 21930:2017)

|  | Product<br>stage | Construc     | Construction stage |        |                | Use stage |                |                  |                              |                             |                                   |              | End of life stage   |             |                                 |  |  |
|--|------------------|--------------|--------------------|--------|----------------|-----------|----------------|------------------|------------------------------|-----------------------------|-----------------------------------|--------------|---------------------|-------------|---------------------------------|--|--|
|  | A1/A2/A3         | A4 Transport | A5 Installation    | B1 Use | B2 Maintenance | B3 Repair | B4 Replacement | B5 Refurbishment | B6 Operational energy<br>use | B7 Operational water<br>use | C1 Deconstruction /<br>demolition | C2 Transport | C3 Waste processing | C4 Disposal | D Reuse, recovery,<br>recycling |  |  |
| Climate Change [kg CO <sub>2</sub> eq.] <sup>1</sup> | 1,31E+00         | 1,70E-01     | 8,64E-02           | 0      | 0              | 0         | 0              | 0                | 0                            | 0                           | 4,00E-04                          | 9,00E-04     | 4,00E-03            | 1,03E-01    | -1,03E-01                       |  |  |

<sup>&</sup>lt;sup>1</sup> The indicator includes all greenhouse gases included in GWP-total but excludes biogenic carbon dioxide uptake and emissions and biogenic carbon stored in the product. This indicator is thus almost equal to the GWP indicator originally defined in EN 15804:2012+A1:2013.

# Information on biogenic carbon content

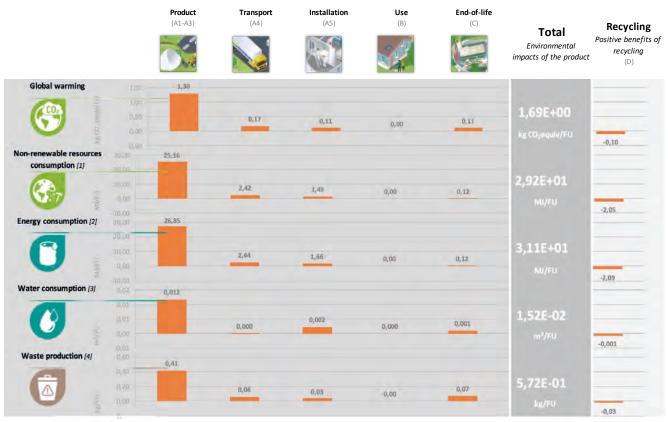

|   |   | Product<br>stage |
|---|---|------------------|
|   | Biogenic Carbon Content                   |                  |
| • | Biogenic carbon content in product [kg]   | 0,00E+00         |
| • | Biogenic carbon content in packaging [kg] | 3,80E-03         |

Note: 1 kg biogenic carbon is equivalent to 44/12 kg CO<sub>2</sub>.

The product does not contain any quantity of biogenic carbon. Regarding packaging, wooden pallets, cardboard core, cardboard box and MDF end plates production is accounted for.

# 8. LCA results interpretation

The following figure refers to a declared unit of  $1 \text{ m}^2$  of installed windows film of the reference product for the family of products in this EPD – namely CLEAR FROST RA.

- [1] This indicator corresponds to the abiotic depletion potential of fossil resources.
- [2] This indicator corresponds to the totla use of primary energy.
- [3] This indicator corresponds to the use of net fresh water.
- [4] This indicator corresponds to the sumo f hazardous, non-hazardous and radioactive waste disposed.

#### **Global Warming Potential (Climate Change) (GWP)**

For GWP, the majority of contribution to this environmental impact is from the production modules (A1 - A3). This is primarily because the sources of greenhouse gas emissions are predominant in this part of the life cycle. CO2 emissions are generated upstream from the production of electricity and is also released on site by the combustion diesel and natural gas. Other sections of the life cycle also contribute to the GWP. However, the production modules contribute to over 70% of the contribution. Emissions from waste disposal in A5 (disposal after installation) and C (transport and disposal at the end of life) generate the second highest percentage of greenhouse gas emissions.

#### Non-renewable resources consumptions

The consumption of non – renewable resources is once more found to have the highest value in the production modules. Due to diesel and natural gas consumption within the factory. For non – renewable fuels such as coal and oil are used to generate electricity during manufacturing. The contribution to this impact from the other modules is very small and primarily due to the non – renewable resources consumed during installation.

#### **Energy Consumptions**

Modules A1 – A3 have the highest contribution to total energy consumption. Energy is consumed in the form of electricity, diesel and natural gas during the manufacturing process.

# 9. Additional information

# Additional information on VOC indoor emission during the use stage

Based on the test conducted, Solar Gard window film products meet the requirements for VOC's according to the standards.

# Additional information on emission on soil and water during the use stage

Without object as test is not conducted.

#### **Declaration of additional scenario information in A4**

The transport to the market (A4) on this EPD is calculated based on average distance that covers all the countries in Europe and in MEA/India.

Additional information is given in the table below regarding distances to other relevant markets and calculation factors for converting A4 to the specific market. Impact figures for A4 shall be multiplied by the multiplication factor in table 5.

 Table 5

 Details on multiplication factor due transport for different geographies:

| Country                          |        | Average distance |       | Multiplication<br>factor |
|----------------------------------|--------|------------------|-------|--------------------------|
|                                  | Truck  | Ship             | Plane |                          |
| Europe & MEA/India               | 2923   | 8682             | 1972  | 1                        |

## **Data quality**

Inventory data quality is judged by geographical, temporal, and technological representativeness. To cover these requirements and to ensure reliable results, first-hand industry data crossed with LCA background datasets were used. The data was collected from internal records and reporting documents. After evaluating the inventory, according to the defined ranking in the LCA report, the assessment reflects good inventory data quality.

| Geographical rating | Temporal rating | Technology Rating |
|---------------------|-----------------|-------------------|
| 2,3                 | 2,0             | 2,0               |

# 10. Deutsche Zusammenfassung

#### **Zum Unternehmen Solar Gard**

Solar Gard baut auf fast 50 Jahre Erfahrung in der Entwicklung und Herstellung von Flachglasfolien und ist in mehr als 90 Ländern vertreten.

Solar Gard ist ein führendes Unternehmen im Bereich patentierter Technologien für Sonnenschutz unter anderem Schutzfolien für Wohngebäude und für Geschäftsgebäude sowie Fahrzeuge und öffentliche Verkehrsmittel. Solar Gard wurde Teil von Saint-Gobain 2011.

# **Produktbeschreibung**

Name des Produkts / der Produktfamilie und der vertretende Hersteller in der forliegenden Umweltproduktdeklaration (EPD): Solar Gard Oberflachenschutzfolien (Kratzschutz & Anti-Graffiti-/Anti Vandalismus Folien) mit ein Nennstärke bis zu 2 mil (50 µm) bzw. Dekorfolien. Die Folien sind hergestellt im Solar Gard Werk in San Diego, USA.

Alle in dieser Umweltproduktdeklaration (EPD) aufgeführten Produkte erfüllen die Anforderungen nach DIN EN 15752-1 "Glas im Bauwesen - Selbstklebende Polymerfolie - Teil 1: Begriffe und Anforderungen".

Die Produkte sind laut ICS einzuordnen unter 83.140.10 "Folien und Platten". Nach der Zentralen Gütersystematik der Vereinten Nationen mit Sitz in New York von 2015 gehören diese Produkte zum Bereich "Tafeln, Platten, Folien, Filme, Bänder, Streifen und andere Flacherzeugnisse, selbstklebend,

Insgesamt umfasst diese EPD 5 Dekorfolien und 1 Kratzschutz & Anti-Graffiti-/Anti Vandalismus Folie. Das Referenzprodukt für die in der EDP erfassten Produkte ist Solar Gard CLEAR FROST RA (als Rollenware, in einer Breite von 1,52 m (60") und einer Länge von 30,5 m (100 ft.)). Die Abweichungen zwischen den in der EPD erfassten Produkten und dem Referenzprodukt Solar Gard CLEAR FROST RA bleibt in einem Bereich von ±10%, wie in den Produkt-Kategorieregeln (PCR) gefordert.

# Details zur Berechnung der Ökobilanz (LCA)

aus Kunststoffen" 3919 (HS 2007) bzw. 36920 (CPC2), 2220 (ISIC 4).

- Deklarierte Einheit: 1m² des verlegten Produkts
- Systemgrenzen: die vorliegende Studie deckt alle Ökobilanzen des Produkts ab, "von der Wiege bis zur Bahre", einschließlich Modul D.
- Referenz-Lebensdauer: die Referenz-Lebensdauer (RSL) des Fensterfolienprodukts wird auf 10 Jahre gelegt für die Dekorfolien. Dies ist der Garantiezeitraum, den wir für unser Produkt empfehlen, ohne dass diese in diesem Zeitraum nachgerüstet werden muss. Dennoch liegt die Lebenserwartung bei 15-20 Jahren. Die Referenz-Lebensdauer (RSL) des Fensterfolienprodukts wird auf 5 Jahre gelegt für die Oberflachenschutzfolien.
- Geographischer Erfassungsbereich und Zeitraum: geographisch werden Europa, der Mittlere Osten und Afrika, sowie Indien abgedeckt. Die verwendeten Produktionsdaten sind für das Jahr 2019 einer Produktionsstelle, nämlich das Werk in San Diego, USA.

# **LCA Ergebnisse**

Wie in EN 15804:2012+A2:2019 und den Produkt-Kategorieregeln festgelegt, werden die Umwelteinflüsse anhand der Basisfaktoren der Gemeinsamen Forschungsstelle (JCR) der Europäischen Kommission festgelegt. Diese findet man unter dem folgenden Link: https://eplca.jrc.ec.europa.eu/LCDN/developerEF.xhtml. Spezifische Daten wurden durch die Anlage ermittelt. Generische Daten stehen zur Verfügung aus den Datenbanken der GABI und Ecoinvent. Sämtliche Emissionen in die Luft, ins Wasser und den Grundboden sowie alle genutzten Materialien und Energieverbräuche wurden ebenfalls erfasst.

Sämtliche Zahlen beziehen sich auf den ausgewiesenen Bereich von 1m² der montierten Fensterfolie.

Die Tabellen im Abschnitt 7 "LCA results" beziehen sich auf das Referenzprodukt der Produktfamilie in dieser EPD - d.h. CLEAR FROST RA. Beschreibung der Systemgrenze (X = in LCA erfasst, MNA = Modul nicht bewertet).

# 11. Acronyms

| ACRONYM                               | EXPLANATION  |
|---------------------------------------|--|
| A (%)                                 | Reflection of solar energy   |
| ADP fossil [MJ]                       | Resource use, energy carriers [MJ]   |
| ADP Min&Met [kg Sb eq.]               | Resource use, mineral and metals [kg Sb eq.]   |
| AP [Mole of H+ eq.]                   | Acidification terrestrial and freshwater [Mole of H+ eq.]  |
| BREAK - kg/cm                         | Break resistance   |
| BREEAM                                | Building Research Establishment Environmental Assessment Method  |
| E                                     | Emissivity   |
| ELONG                                 | Elongation   |
| EN 12600                              | Humain impact  |
| EN 12600                              | European norm Impact test  |
| EN 356                                | Intrusion resistance   |
| EN 356                                | European norm for Intrusion test   |
| EP freshwater [kg P eq.]              | Eutrophication freshwater [kg P eq.]   |
| EP freshwater [kg PO4 eq]             | Freshwater [kg PO4 eq]   |
| EP marine [kg N eq.]                  | Eutrophication marine [kg N eq.]   |
| EP terrestrial [Mole of N eq.]        | Eutrophication terrestrial [Mole of N eq.]   |
| EWFA                                  | The International Window Film Association  |
| FR (%)                                | Fade reduction coefficient   |
| G                                     | Solar heat gain coefficient (G-value)  |
| GL (%)                                | Glare Reduction  |
| GWP-biogenic [kg CO <sub>2</sub> eq.] | Climate Change (biogenic) [kg CO <sub>2</sub> eq.]   |
| GWP-fossil [kg CO <sub>2</sub> eq.]   | Climate Change (fossil) [kg CO <sub>2</sub> eq.]   |
| GWP-Lulu [kg CO <sub>2</sub> eq.]     | Climate Change (land use change) [kg CO <sub>2</sub> eq.]  |
| GWP-total [kg CO <sub>2</sub> eq.]    | Climate Change [kg CO <sub>2</sub> eq.]  |
| HDPE                                  | High Density Polyethylene  |
| IGU                                   | Insulated Glass Unit   |
| IRER (%)                              | IR Energy Rejection @780-2500nm  |
| ISO 16933, GSA, ASTM; INERIS          | Explosion (bomb blast) tests   |
| LDPE                                  | Low Density Polyethylene   |
| LEED                                  | Leadership in Energy and Environmental Design Window film with considerably reduced emissivity allowing to improve |
| Low-E film                            | the U-value of the glass it is applied on  |
| ODP [kg CFC-11 eq.]                   | Ozone depletion [kg CFC-11 eq.]  |
| PCOP [kg NMVOC eq.]                   | Photochemical ozone formation - human health [kg NMVOC eq.]  |
| PCR                                   | Product Category Rule(s)   |
| PEEL - g/cm                           | Peel resistance  |
| PS PUNC In                            | Pressure sensitive   |
| PUNC - kg                             | Puncture resistance  |
| R (%)                                 | Absorption of solar energy   |
| Re/Ri (%)                             | Registration, Evaluation, Authorisation and Restriction of Chemicals  Visible light Reflectance Exterior/Interior  |
| SC                                    | Shading Coefficient  |
| SHGR (%)                              | Solar heat gain reduction  |
| SIRR (%)                              | Selective IR Energy Rejection @280-2500nm  |
| SSI                                   | Light to solar heat gain ratio (VLT/SHGC)  |
| Tdw (%)                               | Fading factor (Tdw-ISO @300-700nm)   |
| TEAR - kg                             | Tear resistance  |
| Tnom / T(Qm)                          | Nominal thickness  |
| VLT (%)                               | Visible Light Transmittance  |
| TR (%)                                | Transmittance of solar energy  |
| TS - kg/cm                            | Tensile strength   |
| TSER (%)                              | Total solar energy rejected  |
| TSER (%) -60°                         | Total solar energy rejected @60º angle   |
| U (W/m K)                             | Winter U-factor (W/m² °C)  |
| U Red (%)                             | Fade reduction coefficient   |
| UV (%)                                | UV Blocked @300-380nm  |
| WDP [m world equiv.]                  | Water scarcity [m³ world equiv.]   |
| YIELD - kg/cm                         | Tensile strangth (5% elongation)   |

#### About Saint-Gobain Solar Gard®

Solar Gard is a world leader in patented technologies for solar control and protective window films for buildings and vehicles. As the "Thin Films" division of the global glass and building technology group Saint-Gobain – a company that originated more than 350 years ago with the Hall of Mirrors in the Palace of Versailles – Solar Gard builds on decades of experience in the development and production of window film. The Solar Gard product range provides solutions for upgrading and improving glass in vehicles, homes and large buildings for the comfort and protection of passengers, residents, visitors and employees. Follow Solar Gard on Facebook, Twitter and Instagram. #SolarGard
