

Solar Window Film: Refences Case

Excessive Heat Under Glass Roofs: There Is a Solution!

**Sentinel Plus Silver 20 - Up to 88% solar
energy rejection**

PROJECT INFORMATION

Building & Localisation:

Town Hall
Genappe, Belgium

Problem: Temperatures reached up to 50°C under the Town Hall canopy, which made it uncomfortable for all municipal team members

Solution:

Solar Gard® Sentinel Plus Silver 20

Solar Gard Premium Partner:

Déco Film
Visit www.deco-film.be

Year of installation:

2026

When a glass roof reaches 50°C in summer and the space becomes uncomfortable, it is a clear sign that something needs to be done.

The Town Hall of Genappe faced this exact challenge, a situation that affects both professionals and private owners of glazed roofs.

To address this issue, Déco Film proposed the installation of Solar Gard Sentinel Plus Silver 20 film.

Gérard Couronné, Mayor of Genappe explains:

T: +32 9 240 95 66

"The temperature under the glass roof was unbearable during peak summer. This year, we allocated part of our budget to the installation of solar control film. As soon as Déco Film began the installation, I immediately felt the difference."

For Mr. Couronné, this thermal upgrade with Sentinel Plus Silver 20 will fully meet the expectations of the Town Hall staff.

Result: up to 88% of solar energy rejected, while reducing glare.
